

15 July - 22 October 2012

The Programme Committee FP7 Capacities Research Infrastructure has discussed and approved a consultation for preparing future EU activities for integrating and opening national research infrastructures. The consultation is open as from 15 July to 22 October 2012.

This is a **call for suggestions of possible topics**, in order to help setting up Integration - Internationalization - Iniziative (I3) proposals with the aim of enabling networks of labs suitable to play the role of infrastructures to carry out research activities on frontier research fields in cooperation with other research centers.

The calls for I3 projects are usually biannual during the course of a Framework Programme. The European Commission is expecting to receive one proposal for each topic that establishes a full integration of European infrastructures and labs in the given field of activity. The duration of an I3 project is usually 3 years and may receive a total financing of € 5-10M.
