

Physics and Chemistry of Biological Systems PhD Programme

Positions Available

The activities of our group are focused on the development and application of theoretical and computational approaches to characterize the properties of biomolecular systems. The PhD programme has a highly interdisciplinary character and, accordingly, the faculty includes members from the SISSA Physics and Mathematics areas, the CNR-IOM Democritos center and ICTP, the International Center for Theoretical Physics.

The PhD programme offers an advanced, research-oriented training in theoretical and computational topics at the interface of Physics, Chemistry and Biology.

Deadline for online submission:

March 12, 2018

Exams

March 26/27, 2018
