Oggetto: bando di ammissione al corso di perfezionamento “Master in High performance Computing” aa 2022/2023

IL DIRETTORE

VISTO l’art. 1, comma 5 dello Statuto della Scuola pubblicato sulla G.U. n.36 del 13.02.2012;

CONSIDERATO che la Scuola intende attivare anche per l’anno accademico 2022/2023 il corso di perfezionamento “Master in High Performance Computing”;

VISTA la delibera del Consiglio del Laboratorio Interdisciplinare per le Scienze Naturali ed Umanistiche del 14.03.2022;

APPURATA la necessità di provvedere;

DECRETA

Art. 1 di indire, per l’anno accademico 2022/2023, il concorso per titoli, esami e colloquio per l’ammissione al corso di perfezionamento “Master in High Performance Computing” gestito dal Laboratorio Interdisciplinare per le Scienze Naturali ed Umanistiche della Scuola Internazionale Superiore di Studi Avanzati di Trieste;

Art. 2 che i requisiti di ammissione, i tempi e le modalità di espletamento delle procedure concorsuali sono specificati nell’allegato bando di concorso che costituisce parte integrante del presente decreto.

High Level Education in High Performance Computing: MHPC.
Application Call 2022 - 2023

SISSA and ICTP promote a 12 months education program in High Performance computing. The program spans the academic year 2022-2023, starting from September 12, 2022.

**Short description**
The specialization course (Corso di Perfezionamento) Master in High Performance Computing (MHPC) hosted and organized by SISSA (International School for Advanced Studies) and ICTP (Abdus Salam International center for theoretical physics), is an innovative degree program devoted to training students in the booming field of HPC. SISSA and ICTP are well-known first rank institutions in applied and theoretical mathematics and physics.

MHPC is an innovative educational program, that trains scientists and professionals in modern computational technologies. MHPC trains students in taking the right decision with the right tools for each computational problem. Students that complete the Master have a solid background in scientific computing approaches, algorithms, and modeling.

The program combines lectures with hands-on tutorials. Tutorial sessions are strongly application-oriented, and a final thesis defense completes the program.

**Courses**
Courses are organized in full-day programs which include active lectures during the morning and practice hands-on tutorials during the afternoon. They are held by internationally renowned scientists. Tutorial sessions are strongly application-oriented and will be used to assess the learning process.

**PART I, HPC Concepts and Programming: ~5 months**
Advanced and parallel programming, software design and management, numerical analysis, data management, computer hardware and administration.

- 1.1 Scientific programming environment
- 1.2 Introduction to Computer Architectures for HPC
- 1.3 Introduction to Parallel Programming
- 1.4 Advanced Programming
- 1.5 Introduction to Numerical Analysis
- 1.6 High Performance Computing Technology
- 1.7 Scientific data management
- 1.8 Advanced Linear Algebra Libraries and Accelerators
- 1.9 Best Practices in Scientific Computing

**PART II, HPC Algorithms for Science and Technology: ~1 months**
The second part of the master is devoted to implement HPC strategies in non standard scientific and industrial applications. This part is composed by one mandatory course and other optional courses for at least 16 CFUs (for a total duration of at least one month of courses. 4 CFUs correspond approximately to a one-week course). Optional courses will be activated only if a sufficient number of students will be attending. The second part is spread from February to June included. As an example of the course list of the second part, we report some of the courses of the previous editions:

- Data Structures & Sorting and Searching (mandatory)
- Electronic structure: from blackboard to source code (2 CFU)
- Advanced Computer Architectures & Optimizations (4 CFU)
- The Finite Element Method Using deal.ii (4 CFU)
- Reduced Basis Methods (4 CFU)
- Fast Fourier Transforms in Parallel and Multiple Dimensions (4 CFU)
- Monte Carlo methods (4 CFU)
- Supervised Machine Learning (2 CFU)
- Unsupervised Machine Learning (2 CFU)
Supervised Machine Learning applied to text analytics (2 CFU)
• Reinforced Learning (4 CFU)
• Deep Learning (4 CFU)
• Approximation and interpolation of simple and complex functions (2 CFU)
• Spatial locality algorithms (2 CFU)
• Lattice Boltzmann (2 CFU)
• Molecular dynamics (2 CFU)

PART III, HPC Thesis development: 6 months
During the last period of the master, students will develop a technically and scientifically challenging project in collaboration with an on-going research team and/or an industrial partner. In their projects, students apply the skills developed in the previous sections of the program. Project proposals must be submitted to and accepted by a committee and must be overseen by a qualified adviser. The project should not last more than nine months and should then be reported in a written thesis. The thesis development may overlap with the second part of the courses. During the thesis project, students may be supported by fellowships from sponsoring institutions or industrial partners. A thesis defense completes the program.

Fees
The MHPC fee is € 7,000,00.-. Non-EU applicants who require a VISA may need to provide proof of financial coverage for the master fee and for the living expenses during the entire duration of the master course. **MHPC does not provide any financial coverage.** Any agreement with external financial institutions or contributed company must be undertaken by the candidates themselves before the deadline of the MHPC applications (see [www.mhpc.it](http://www.mhpc.it) for available scholarships or contributions).

External support for students from developing countries
ICTP offers every year a variable number of scholarships for applicants from developing countries, covering the MHPC fees as well as the cost of living expenses. The deadline for the applications for these scholarships is typically at the end of March (much earlier than the deadline for the application to MHPC itself), due to time restrictions in the VISA request procedures. Please consult the website [www.mhpc.it](http://www.mhpc.it) for the exact deadlines for these scholarships. The scholarships are provided by ICTP (not by MHPC), and **winners are automatically admitted to MHPC.**

Support for SISSA PhD students and former SISSA PhD students
SISSA waves the fee of MHPC to its PhD students who are enrolled on one of its PhD courses on the date of the official start of MHPC classes, and to former students who have obtained their doctorate no more than 12 months before the start date of the lessons and that are currently unemployed, for a maximum of **six exemptions**. The exemption is granted to the first three PhD students and to the first three former PhD students that are admitted to the Master, according to the ranking of the admission. Should the number of admitted students or former students be less than three, the exemptions not enjoyed by one of the two categories will be transferred to the other. Beneficiaries of the exemption are required to complete the training course, under penalty of paying € 1,000,00.-. to SISSA, as a contribution to the training costs. If the beneficiary of an exemption is awarded a scholarship that also includes a contribution for the fees (see next section), the benefit of the exemption is withdrawn and the student is required to pay the balance of the entire fee for participation in MHPC. SISSA PhD students are encouraged to enroll in MHPC during their second to fourth year of the PhD. If they result among the admitted MHPC students, they must obtain a nulla osta from their advisors and from the “collegio dei docenti” of their PhD. SISSA PhD scholarships are **not compatible with other scholarships, and cannot be cumulated.**

External scholarships
Other research institutes as well as private companies and industries may offer scholarships to cover the fee of the master and/or partial/full living expenses. All of these scholarships will be advertised on the website [www.mhpc.it](http://www.mhpc.it), and will have their own deadlines and conditions.
These are independent with respect to the MHPC application and deadline, and application/admission to these scholarships will not imply application/admission to MHPC, which must be actuated separately. The only exception to this rule is given by winners of ICTP scholarships for developing countries, who are granted admission to MHPC.

**Prerequisites**

MHPC is accessible by Italian students graduated with "laurea magistrale (D.M. 270/2004)" and "laurea Vecchio Ordinamento (L. 341/1990)". International applicants with a Bachelor, Master, or Doctoral degree are welcome to apply.

**Application Procedure**

The application procedure is available online at [www.mhpc.it](http://www.mhpc.it). The deadline for the applications is set to **July 12th, 2022 at 11:59 am**.

**Evaluation Procedure**

Online applications will be evaluated mostly on the applicant curriculum. A short phone or online interview may be required. Admitted applicants from non-EU countries must be able to complete any required VISA procedures before the start of the courses (**September 12th, 2022**).
