

BUSTA 4

- Il/la candidato/a discuta i pro e i contro della datavisualization per la comunicazione scientifica e con quali strumenti disponibili sul mercato oggi si può realizzare.
- Il/la candidato/a illustri le principali caratteristiche della piattaforma Drupal e discuta le finalità principali del sito web ufficiale di un'istituzione o ente scientifico internazionale.
- Gli Organi della Scuola, ai sensi dello Statuto della SISSA
- Testo inglese da tradurre in lingua italiana

Behind each X-ray photography, there is a lot of work. There are difficulties, but thanks to the excellent knowledge of X-rays and their use and to the passion for photography, Dr. Van't Riet succeeds in creating his "bioramas". The first step is to get the material. Flowers are collected or purchased, and dead animals are founded on the street or purchased. Once he has collected the material, Arie proceeds with the composition, which takes place on a particular silver bromide X-ray film. He then exposes the film to an X-ray source located about one meter above it. This way, what Arie gets is the negative of the flower or animal composition: a white image of the starting composition on a black background. All the steps required from the initial image composition to the negative picture are done analogically. The negative is then digitally edited. Finally, Arie colours some picture details to complete his creation.

LA PRESIDENTE DELLA COMMISSIONE  
dott.ssa Erica Maran
